**Mathematics: applications and interpretation**  
**Higher level**  
**Paper 1**

15 May 2025

**Zone A** afternoon | **Zone B** afternoon | **Zone C** afternoon

Candidate session number

2 hours

--	--	--	--	--	--	--	--	--	--

**Instructions to candidates**

- Write your session number in the boxes above.
- Do not open this examination paper until instructed to do so.
- A graphic display calculator is required for this paper.
- Answer all questions.
- Answers must be written within the answer boxes provided.
- Unless otherwise stated in the question, all numerical answers should be given exactly or correct to three significant figures.
- A clean copy of the **mathematics: applications and interpretation HL formula booklet** is required for this paper.
- The maximum mark for this examination paper is **[110 marks]**.

Answers must be written within the answer boxes provided. Full marks are not necessarily awarded for a correct answer with no working. Answers must be supported by working and/or explanations. Solutions found from a graphic display calculator should be supported by suitable working. For example, if graphs are used to find a solution, you should sketch these as part of your answer. Where an answer is incorrect, some marks may be given for a correct method, provided this is shown by written working. You are therefore advised to show all working.

1. [Maximum mark: 7]

**Give answers to this question correct to two decimal places.**

Pierre invests 1500 euros (EUR) at the end of each month for 10 years into a savings plan that pays a nominal annual interest rate of 3.6% compounded monthly.

(a) Calculate the value of Pierre's savings plan at the end of the 10 years. [3]

At the end of the 10 years, Pierre withdraws 100 000 EUR from the savings plan to use as a deposit on a house.

Pierre invests the remainder into another account for 15 years at a nominal annual interest rate of 4.5% compounded quarterly.

(b) Calculate the amount in Pierre's account at the end of this time. [4]

**(This question continues on the following page)**

2. [Maximum mark: 9]

The point A has coordinates  $(1, 2, 1)$  and the point B has coordinates  $(3, 5, 2)$ .

(a) Find AB. [2]

Triangle ABC is right-angled with its right angle at B. The point C has coordinates  $(2, 8, k)$ .

(b) Find the value of  $k$ . [4]

(c) Calculate the size of  $\hat{BAC}$ . [3]

Consider the Voronoi diagram which shows the sites  $A(3, 3)$ ,  $B(10, 5)$ ,  $C(7, 2)$ ,  $D(5, 9)$ ,  $E(1, 5)$  and  $F(6, 5)$ . The diagram also shows the cells formed by each site and their boundaries.

Vertex  $X$  is equidistant from sites  $B$ ,  $C$  and  $F$ .

(a) (i) Write down the coordinates of  $X$ .

(ii) The exact value of  $BX$  is  $\sqrt{n}$ . Write down the value of  $n$ .

[2]

Vertex  $Y(a, b)$  is equidistant from sites  $B$ ,  $D$  and  $F$ .

(b) (i) Write down the value of  $a$ .

(ii) Find the exact value of  $b$ .

[5]

(This question continues on the following page)

5. [Maximum mark: 6]

A speed camera is used to determine whether a car is exceeding a speed limit of  $8.3 \text{ m s}^{-1}$ .

An exact distance of 10 m is marked out.

The car travels this 10 m distance in 1.2 seconds, measured to the nearest 0.1 second.

Determine whether it is certain that the car was exceeding the speed limit of  $8.3 \text{ m s}^{-1}$ .

Justify your answer.

7. [Maximum mark: 7]

(a) Find the indefinite integral  $\int xe^{-x^2} dx$ . [4]

(b) Hence find the area bounded by the  $x$ -axis, the curve  $y = xe^{-x^2}$  and the line  $x = k$ .  
Give your answer in terms of  $k$ . [3]

8. [Maximum mark: 6]

A mapping system stores the connections between 5 towns, labelled A, B, C, D and E, in an adjacency matrix. The adjacency matrix, with rows and columns in alphabetical order, is

$$\begin{pmatrix} 0 & 1 & 0 & 0 & 1 \\ 1 & 0 & 0 & 1 & 1 \\ 0 & 0 & 0 & 1 & 0 \\ 0 & 1 & 1 & 0 & 0 \\ 1 & 1 & 0 & 0 & 0 \end{pmatrix}.$$

- (a) Draw and label a graph to represent the adjacency matrix. [2]
- (b) Determine the number of walks of length 4 which start and end at the same town. [4]

12. [Maximum mark: 9]

An engineer's model for an object's motion is that its acceleration,  $\frac{dv}{dt}$ , is proportional to  $v^{1.5}$ , where  $v$  is its velocity measured in  $\text{m s}^{-1}$ .

(a) Write down a differential equation based on the engineer's belief. [1]

The initial velocity of the object is  $4 \text{ m s}^{-1}$  and its initial acceleration is  $-3 \text{ m s}^{-2}$ .

(b) Use the engineer's model to find an expression for the velocity of the object after  $t$  seconds. [8]

15. [Maximum mark: 8]

An astronomer models the shape of a parabolic mirror using the equation  $y = x^2$ .

(a) Find the equation of the normal to the mirror at the point (2, 4). [3]

A ray of light comes from an object at coordinates (0, 10) and hits the mirror at the point (2, 4).

(b) Find the gradient of the ray of light. [2]

(c) Find the angle between the ray of light and the normal to the mirror. [3]
