Physics
Standard level
Paper 2

6 November 2025

Zone A morning | **Zone B** morning | **Zone C** morning

Candidate session number

1 hour 30 minutes

Instructions to candidates

- Write your session number in the boxes above.
- Do not open this examination paper until instructed to do so.
- Answer all questions.
- Answers must be written within the answer boxes provided.
- A calculator is required for this paper.
- A clean copy of the **physics data booklet** is required for this paper.
- The maximum mark for this examination paper is **[50 marks]**.

8825 – 6724

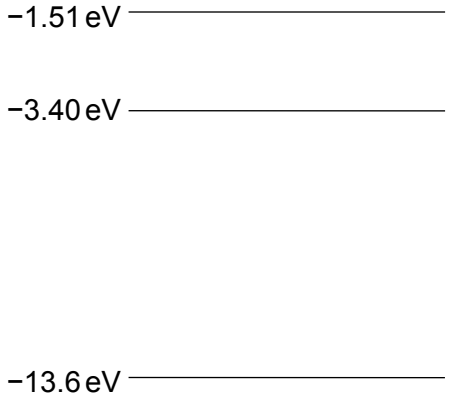
Please **do not** write on this page.

Answers written on this page
will not be marked.

Answer **all** questions. Answers must be written within the answer boxes provided.

1. The diagram shows the three lowest energy levels of the hydrogen atom.
The energy of each level is indicated.

diagram not to scale



(a) State the number of transitions between these levels that result in the emission of photons. [1]

. . . . . .

. . . . . .

(b) Calculate the largest photon wavelength for these transitions. [3]

. . . . . .

. . . . . .

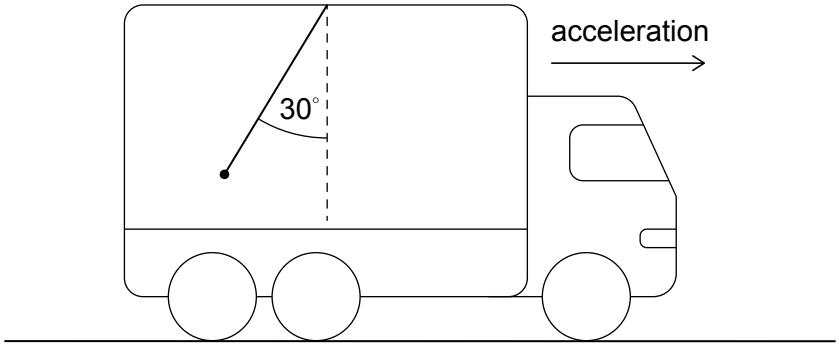
. . . . . .

. . . . . .

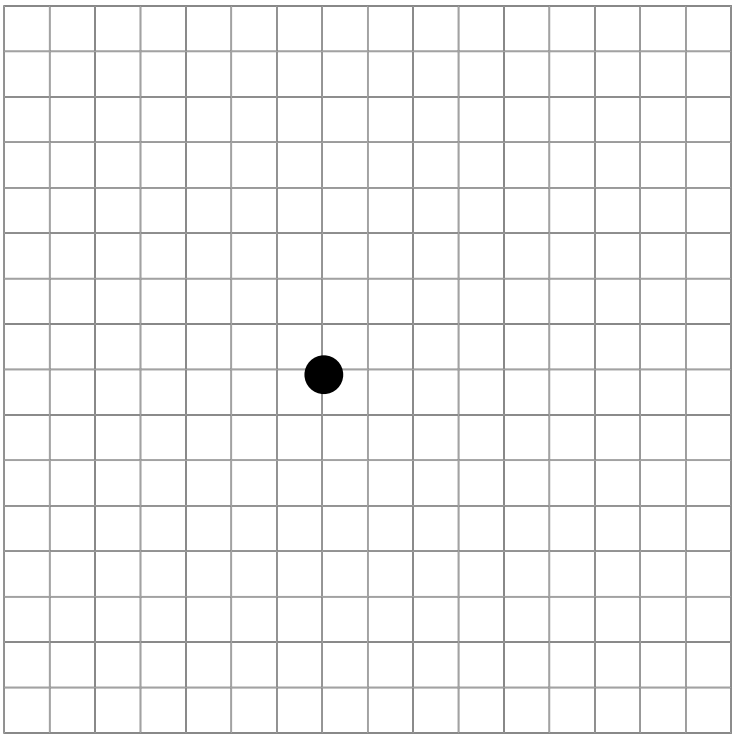
. . . . . .

. . . . . .

2. A ball is connected to a string that is attached to the ceiling of a truck. The truck accelerates to the right on a horizontal road. The string makes an angle of 30° with the vertical.



(a) (i) Draw a labelled free-body diagram of the forces on the ball. [2]



(This question continues on the following page)

(Question 2 continued)

(ii) Determine the acceleration of the truck. [2]

. . . . . .

. . . . . .

. . . . . .

. . . . . .

(b) The truck now moves at **constant** speed up an incline that makes an angle of 10° to the horizontal. State and explain the angle between the string and the vertical. [2]

. . . . . .

. . . . . .

. . . . . .

. . . . . .

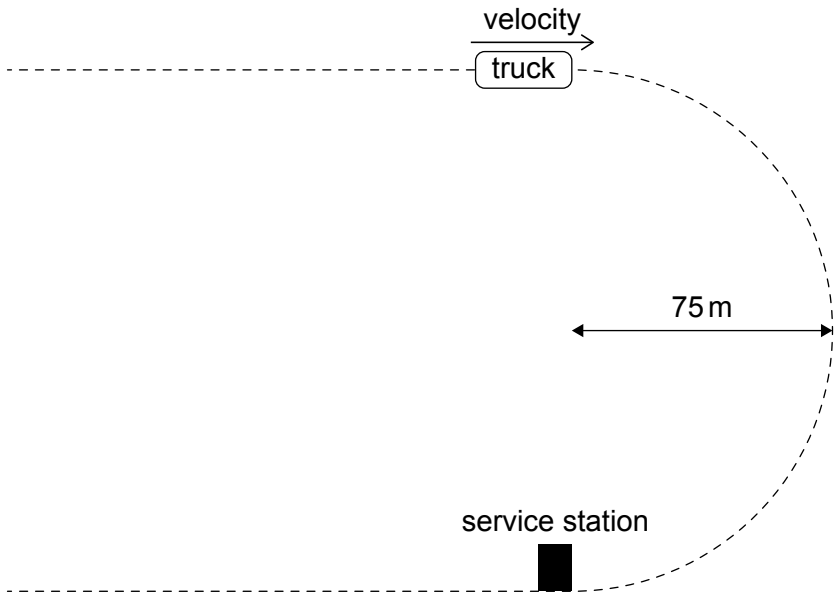
(This question continues on page 7)

Please **do not** write on this page.

Answers written on this page
will not be marked.

(Question 2 continued)

On another occasion, the truck enters a horizontal semicircular road of radius of 75 m. The coefficient of static friction between the road and the tyres is 0.60.



(c) Calculate the maximum speed at which the truck can travel on this road. [2]

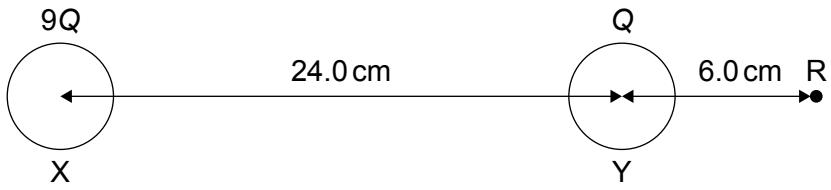
. . . . . .
. . . . . .
. . . . . .
. . . . . .

(d) The truck runs out of fuel just as it enters the semicircle with speed 15 m s^{-1}. The resultant force opposing the motion has magnitude 520 N. The mass of the truck is 1400 kg. A service station is at the other end of the semicircle.

Determine whether the truck will be able to reach the service station. [3]

. . . . . .
. . . . . .
. . . . . .
. . . . . .
. . . . . .
. . . . . .

3. (a) Two identical conducting spheres X and Y that carry positive charges are separated by a centre-to-centre distance of 24.0 cm in a vacuum. The charge on X is 9*Q* and the charge on Y is *Q*. Point R is 6.0 cm from the centre of Y, as shown.



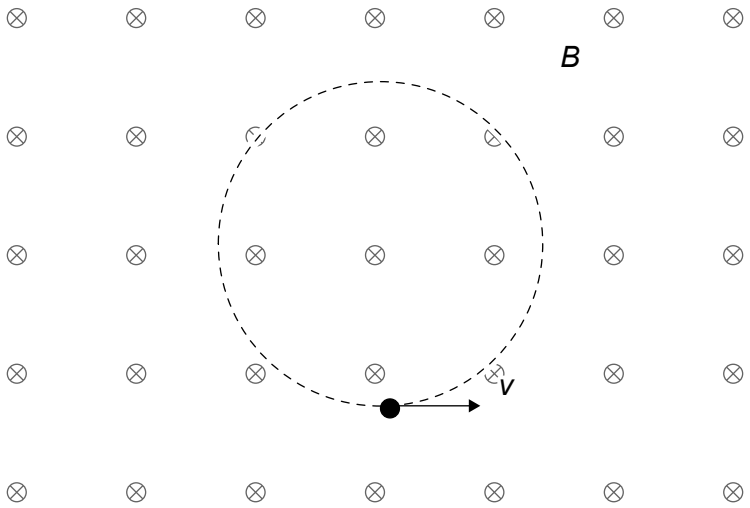
The resultant electric field at R is 32.6 MN C^{-1}. Determine *Q*, giving an appropriate unit. [2]

. . . . . .
. . . . . .
. . . . . .
. . . . . .

(This question continues on the following page)

(Question 3 continued)

(b) A particle of mass m and positive charge q moves on a circular path with speed v in a vacuum. A uniform magnetic field B is directed into the plane of the page.



(i) Show that the radius R of the circular path is given by $R = \frac{mv}{qB}$. [1]

. . . . . .
. . . . . .

(ii) Suggest why the speed of the particle stays constant, even though a force acts on the particle. [1]

. . . . . .
. . . . . .

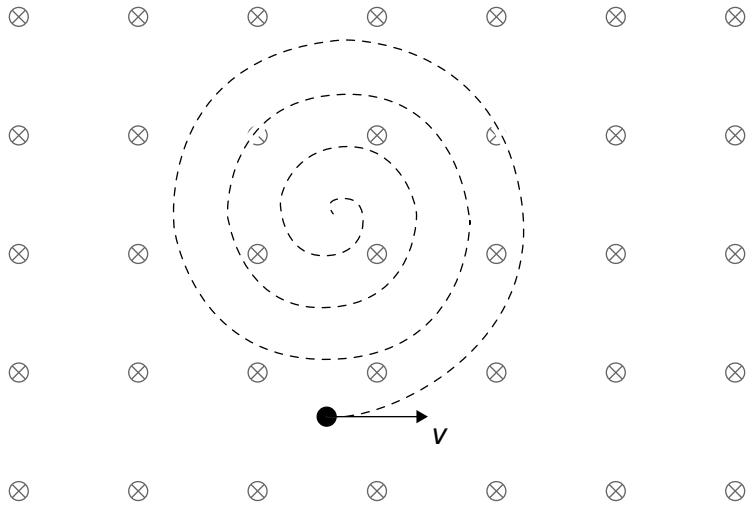
(This question continues on page 11)

Please **do not** write on this page.

Answers written on this page
will not be marked.

(Question 3 continued)

(c) The particle in (b), now moving in a region of magnetic field **in air**, follows the path shown.



Explain the shape of this path. [2]

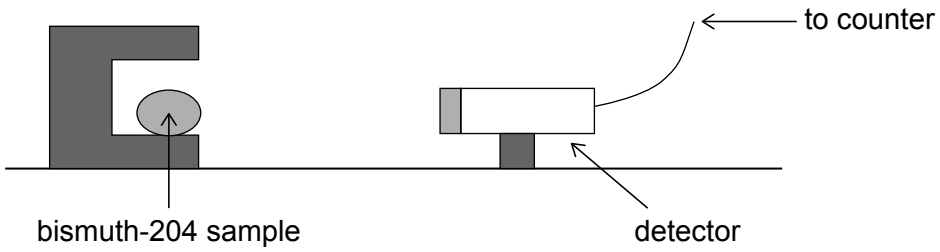
. . . . . .

. . . . . .

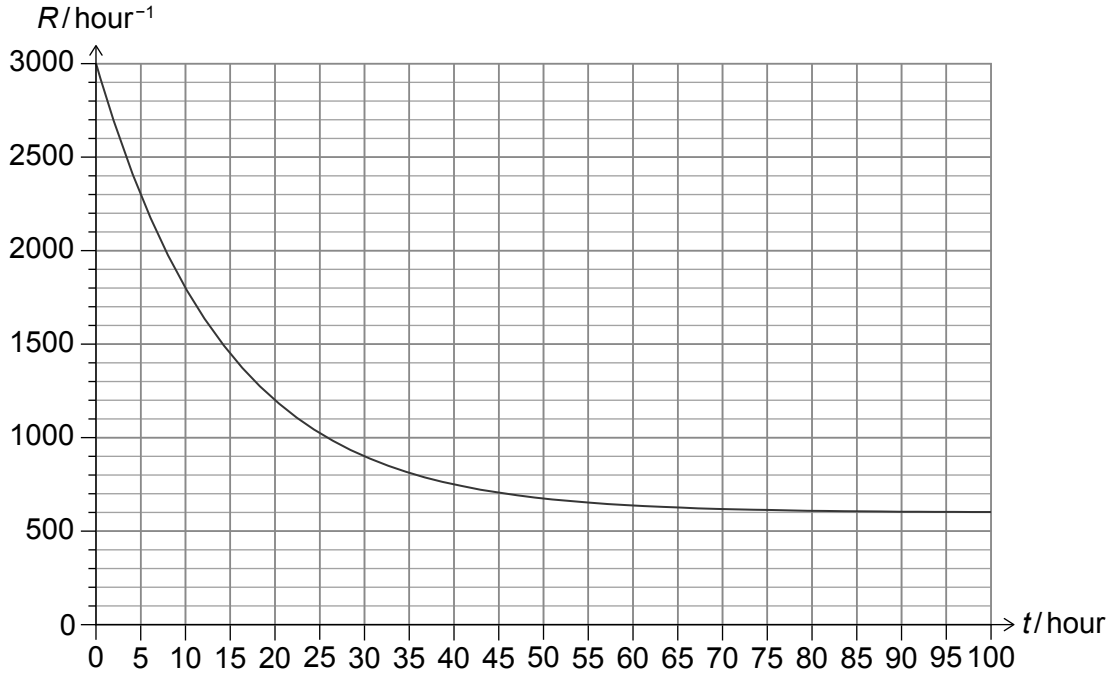
. . . . . .

. . . . . .

4. (a) A pure radioactive sample of bismuth-204 ($^{204}_{83}\text{Bi}$) is placed near a detector, which is connected to a counter.



Bismuth-204 decays into lead ($^{204}_{82}\text{Pb}$) by beta-plus decay according to the equation $^{204}_{83}\text{Bi} \rightarrow {}^{204}_{82}\text{Pb} + e^{+} + \nu$. The graph shows the variation with time *t* of the count rate *R*.



(i) State the background count rate. [1]

. . . . . .

. . . . . .

(This question continues on the following page)

(Question 4 continued)

(ii) Estimate the half-life of $^{204}_{83}Bi$. [3]

. . . . . .

. . . . . .

. . . . . .

. . . . . .

. . . . . .

. . . . . .

(iii) State and explain how the binding energy per nucleon of $^{204}_{83}Bi$ compares with that of $^{204}_{82}Pb$. [2]

. . . . . .

. . . . . .

. . . . . .

. . . . . .

(iv) The distance between the sample and the detector is 20 cm. State why this would be an inappropriate distance for a sample that decayed by alpha decay. [1]

. . . . . .

. . . . . .

(b) The following data are available for **nuclear** masses:

bismuth = 203.932254 u
lead = 203.928034 u

Calculate the energy released in the decay of one nucleus of bismuth-204. [2]

. . . . . .

. . . . . .

. . . . . .

. . . . . .

5. (a) A copper rod has mass 0.400 kg. The density of solid copper is $8.94 \times 10^3\,\text{kg m}^{-3}$. The molar mass (the mass of a mole) of copper is $63.5\,\text{g mol}^{-1}$.

Estimate

(i) the mass of a copper atom; [2]

. . . . . .
. . . . . .
. . . . . .
. . . . . .

(ii) the volume corresponding to each atom, given by $\frac{\text{volume of copper}}{\text{number of copper atoms}}$; [2]

. . . . . .
. . . . . .
. . . . . .
. . . . . .

(iii) the average separation of two neighbouring copper atoms, assuming that the volume corresponding to each atom is a cube. [1]

. . . . . .
. . . . . .

(b) The specific latent heat of fusion of copper is $206\,\text{kJ kg}^{-1}$. Calculate the energy needed to completely melt 0.400 kg of solid copper at its melting point. [1]

. . . . . .
. . . . . .

(This question continues on the following page)

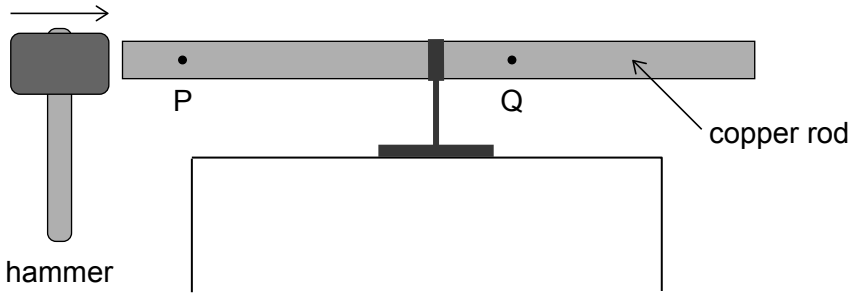
(Question 5 continued)

(c) Copper atoms in the solid and liquid phase coexist at the melting point. Comparing equal numbers of atoms in the solid and liquid phase at the melting point, state and explain which atoms have the greater internal energy. [3]

. . . . . .
. . . . . .
. . . . . .
. . . . . .
. . . . . .
. . . . . .

(d) A copper rod is suspended at its centre, as shown. P and Q are the equilibrium positions of two copper atoms in the rod. When a hammer taps the left-hand end of the rod, the first harmonic sound standing wave is formed in the rod. The longitudinal standing wave in this rod is identical to a standing wave in a pipe with both ends open.

diagram not to scale



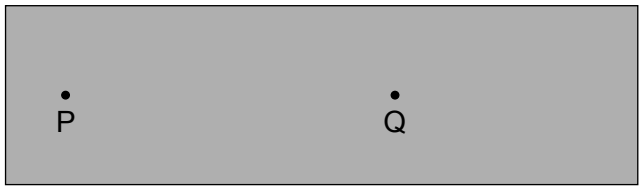
(i) Explain, by reference to the principle of superposition, why a standing wave is set up in the pipe. [2]

. . . . . .
. . . . . .
. . . . . .
. . . . . .

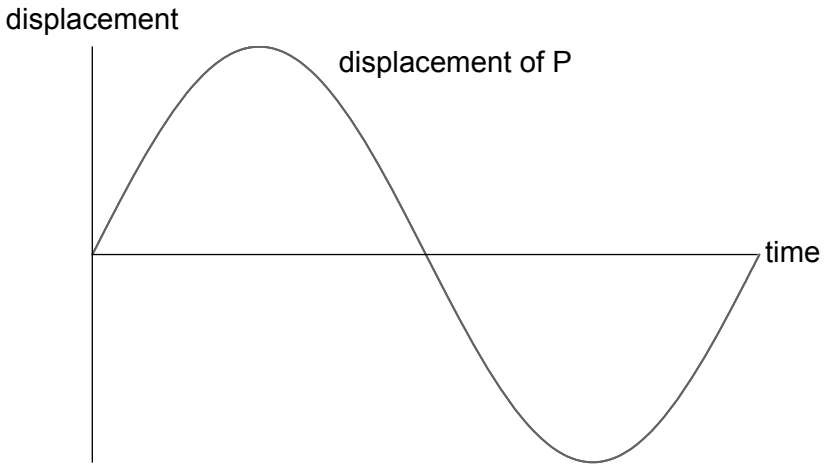
(This question continues on the following page)

(Question 5 continued)

(ii) Draw, on the diagram, the standing wave in the rod. The width of the rod is shown larger to help with your drawing. [1]



(iii) The graph shows the variation with time of the displacement of the atom at P. Draw, on the same axes, the variation with time of the displacement of the atom at Q. [2]

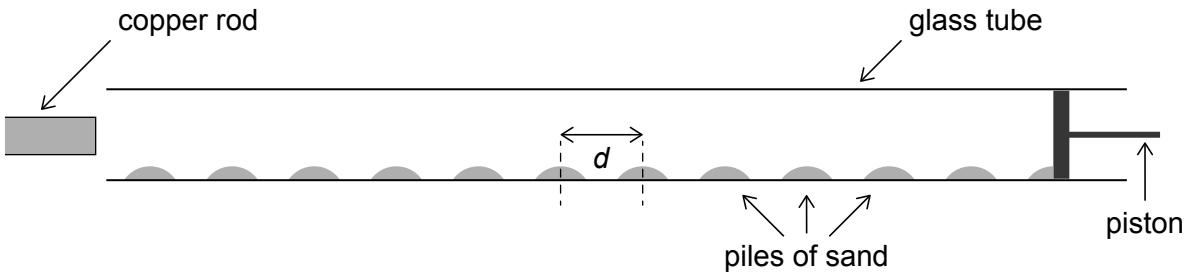


(This question continues on the following page)

(Question 5 continued)

(e) The copper rod is brought close to a glass tube that contains light sand. When the left-hand end of the rod is tapped with a hammer and the length of the tube is adjusted by moving the piston, a standing wave is established in the tube. Sand collects in piles as shown. The distance between the centres of two consecutive piles of sand is *d*.

diagram not to scale



(i) Outline why the sand collects in piles. [2]

. . . . . .
. . . . . .
. . . . . .
. . . . . .

(ii) The following data are available:

$d = 1.8\,\text{cm}$
speed of sound in air $= 330\,\text{m}\,\text{s}^{-1}$
length of copper rod $= 34\,\text{cm}$

Determine the speed of sound in copper. [4]

. . . . . .
. . . . . .
. . . . . .
. . . . . .
. . . . . .
. . . . . .
. . . . . .
. . . . . .
